Regeneration of rat sciatic nerve using tubulation and allogeneic transplantation of adipose-derived mesenchymal stromal cells

Kazan Federal University, 420008, Kremlevskaya 18, Kazan, Russia

Abstract

The effectiveness of application of biodegradable conduit (NeuraGen; INTEGRA, USA) in combination with adipose derived multipotent mesenchymal stem cells and fibrin sealant (Tissucol-Kit; Baxter AG, Austria) on posttraumatic peripheral nerve regeneration was investigated using a rat model of sciatic nerve injury. We demonstrate that our proposed cell therapy confers a neuroprotective effect under our experimental design.
